

The Formentera Council's Office of Agriculture announced that this Monday, October 31, enrolment will begin for continuing education opportunities in produce and livestock farming during the 2016-2017 season. The calendar, which starts November 11 with a course on farming machinery, will continue through the end of March.

Department chair Bartomeu Escandell laid out his office's goal: "Assure a wide variety of courses and training opportunities, open to the public, for the island's farming and livestock sectors". In autumn 2016 and winter 2017 a total of 15 courses are available in farming, animal husbandry and even gardening, with a course on drought-resistant plants filling out the catalogue.

Such courses aim to meet the need for "specialised training in agriculture, livestock rearing and agrofood," said Escandell, as well as offer "basic training for individuals interested in the rural sector".

Courses

Instruction will be given in the following areas: Agricultural machinery, Waste and fertiliser management, Biofertilisers, Basic pesticide use in professional industry, Beekeeping, Fig tree pruning, Fruit tree pruning, Olive tree pruning, Organic ecology, Integrated control of the red palm weevil, Introduction to stone wall repairs, Good health on small ruminant animal farms, Food handling, Xeriscaping and Integrated vineyard production.

The classes, which are free and combine both theory and its practical application, last between 5 and 25 hours and will be held at Centre Antoni Tur "Gabrielet".

Anyone interested in signing up should visit the Citizen's Information Office in person from 9.00am to 2.00pm, do it online via OVAC, request info through the Formentera Council's Office of Agriculture by calling 971.32.10.87 extensions 3166 and 3165, or contact agricultura@conselldeformentera.cat.

Enrolment will remain open as long as there is space available to ensure proper instruction.

Formentera offers 15 courses in agriculture and livestock farming
